

High Visibility Traffic Safety Vests

ANSI/ISEA 107-1999 ANSI Approved (American National Standard Institute)

This standard established three classes of high visibility traffic safety vests. Increasing amounts of fluorescent and retro reflective trim are added for the various classes. They are designated for different levels of visibility depending on the traffic volume and visual complexity of the area in which the vests will be worn.

Class I: For use in areas where the traffic is under 25MPH.

eg: Parking lot attendants, warehouse work, delivery vehicle drivers 2 bands of Reflective Trim
